

SWIPE THE MAGIC

Sometimes a small gesture can have a great impact

If only everything was this simple

Actions speak louder than words.

The action of gestures helps us communicate with other people, express our emotions, and visualize what we expect....

So why not use gestures to communicate with our smart home?

With the intuitive nature of gestures in mind, we designed SWIPE - an exceptionally simple and beautiful device.

Swipe gives you the power to control your Smart Home... with natural movements of your hands. It's not only a uniquely designed photo frame, but also an intuitive controller, which activates all scenes without the need to touch anything.

In this magical way, your life becomes even more convenient.

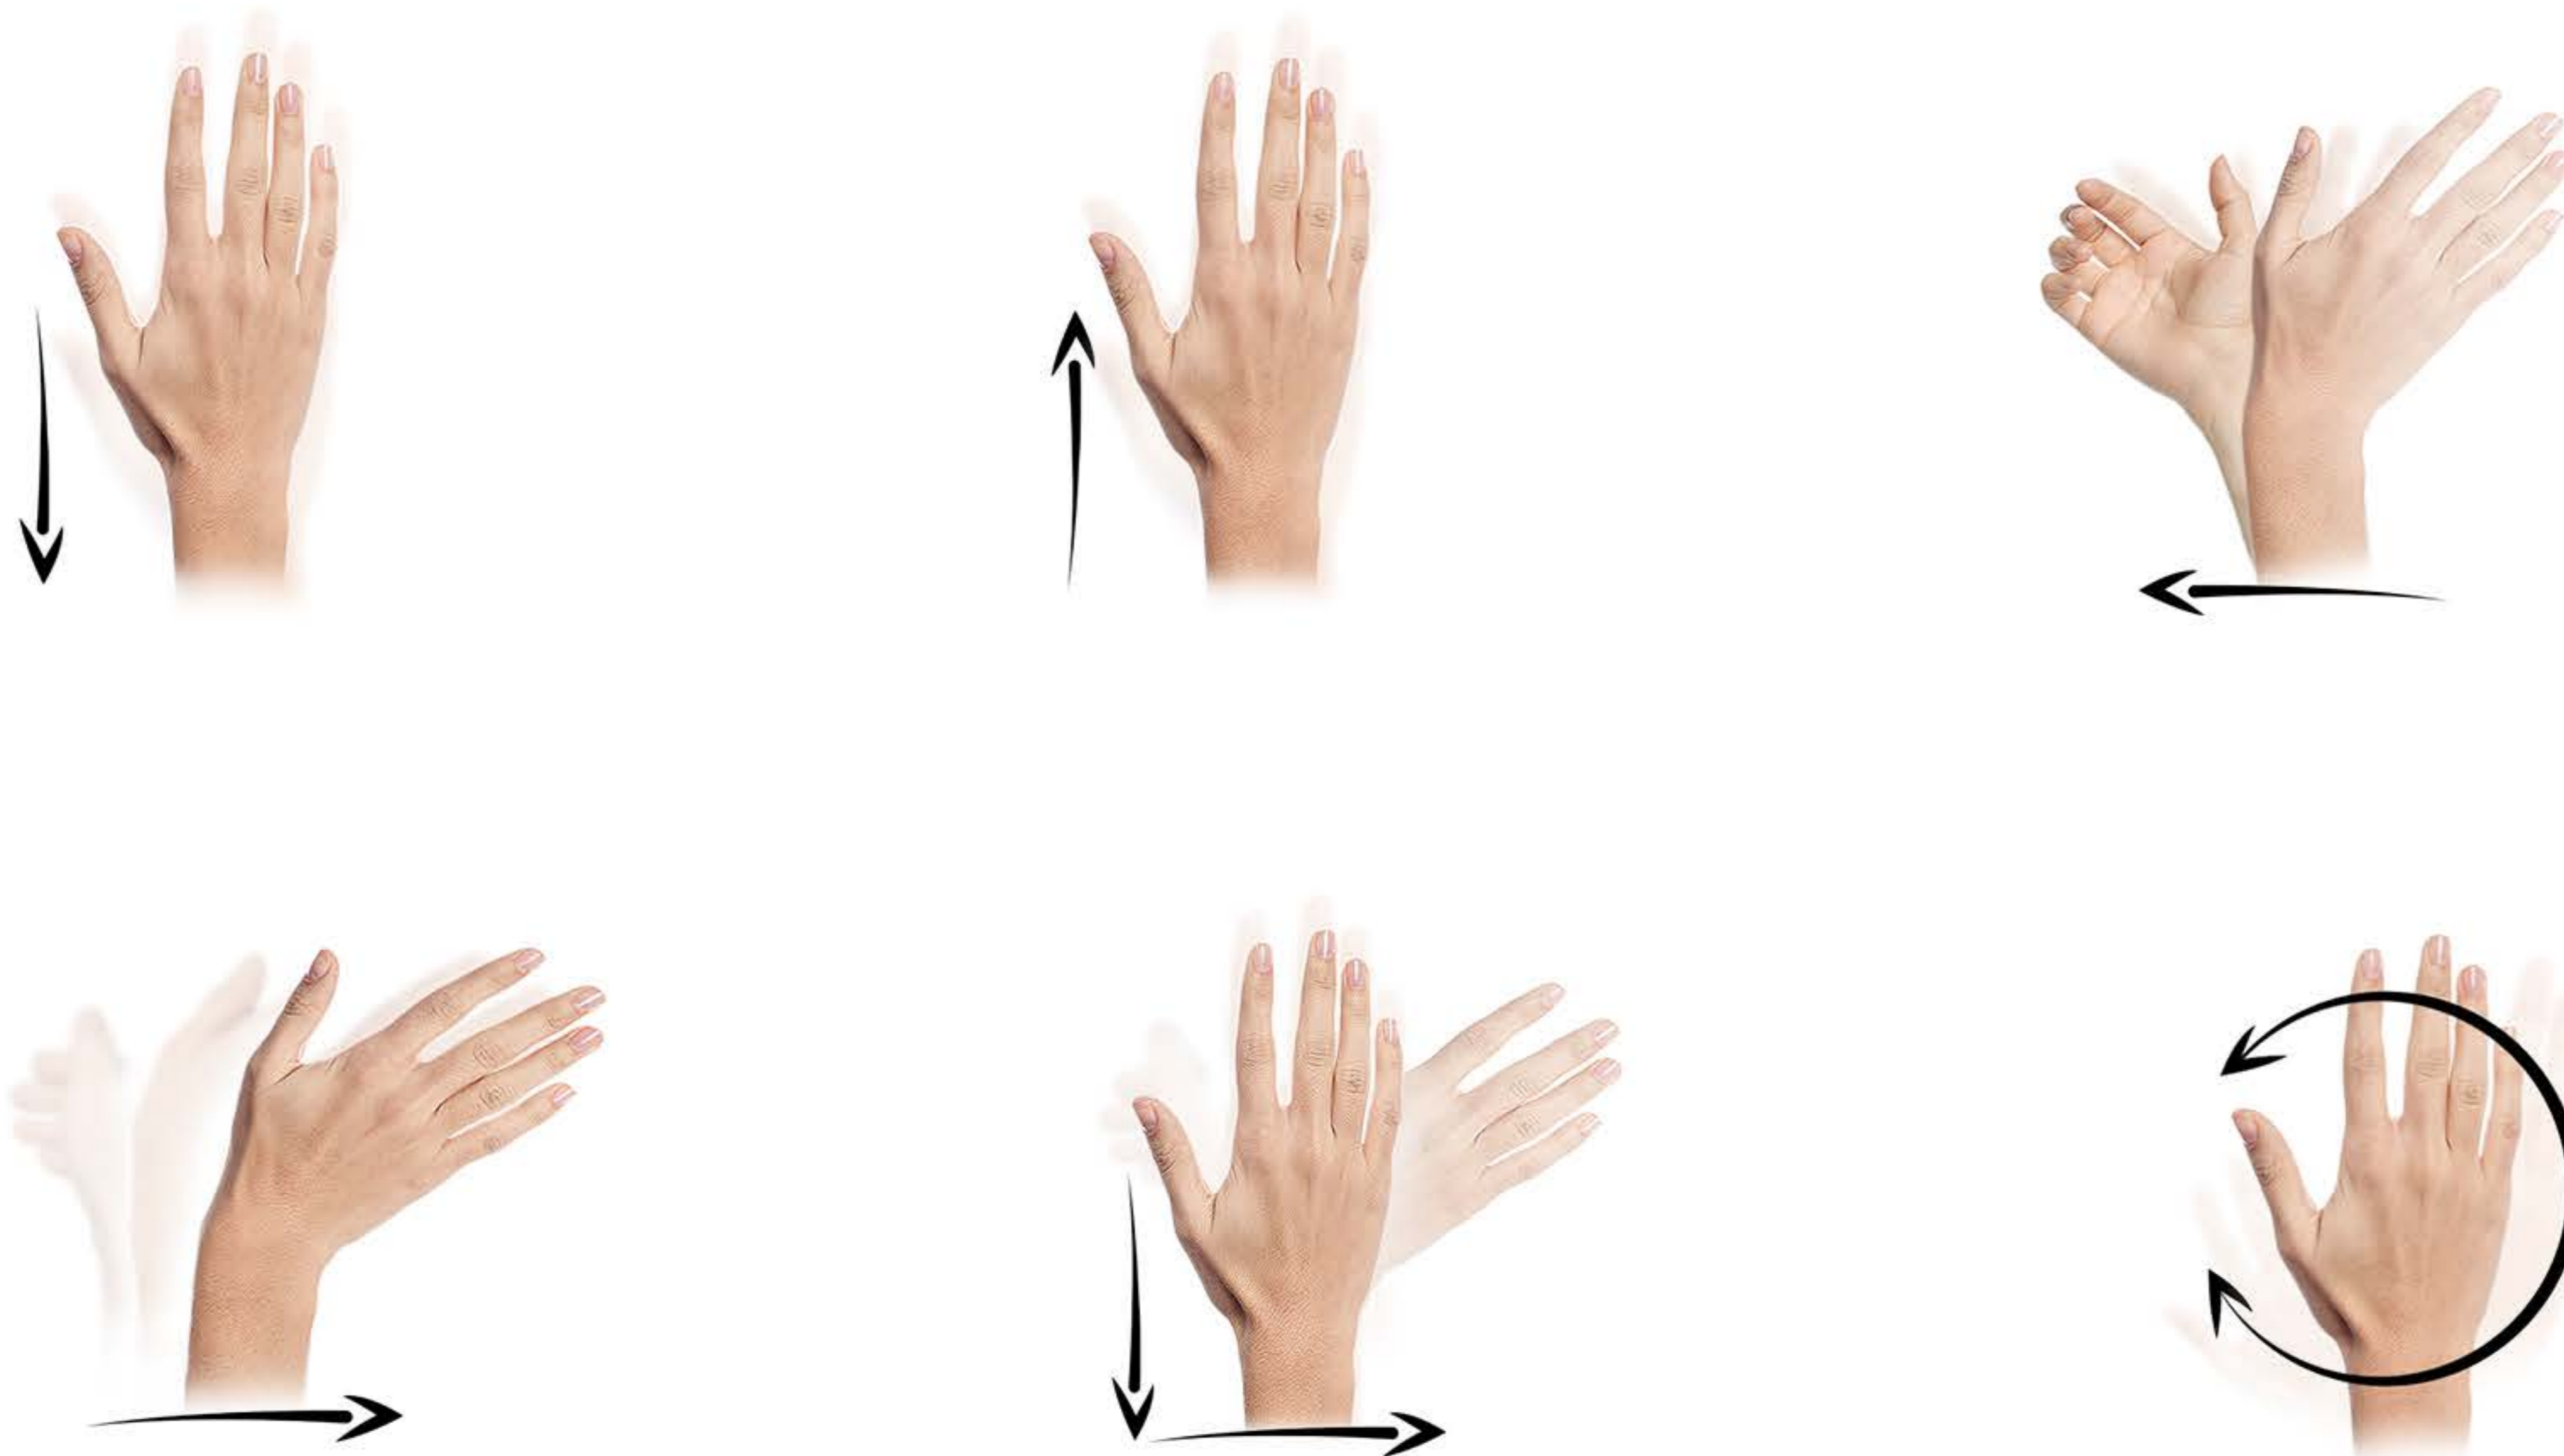

Now it's your move

It's really easy. Raise your hand and swipe it down to turn off the lights. Move your hand up for the color LED lights to turn on and light up the room. Swipe to the right if you want to turn the TV and other electronics off. What is your next move?

Discover the power of gestures

With the wave of your hand you can change the color of the LED strips.
You can also control the heating and air conditioning temperature settings.
Other gestures are only a matter of your imagination. The intelligent SWIPE detects not only simple moves, but combinations of moves as well. The high resolution sensor interprets the most complex commands. You will be surprised by the power of your hands.

More than precision

FIBARO SWIPE is equipped with the most precise 3D motion detecting sensor of its kind, which ensures flawless recognition of the performed gestures. This new, innovative way of controlling home automation devices is not only spectacular, but above all, intuitive and user friendly.

Beautiful, just like you

When displayed, SWIPE can be used as a beautifully designed picture frame and allows you to easily change photos whenever you want. It takes just a moment to remove the front panel and you can relive the memories that bring a smile to your face.

It matches any interior

SWIPE easily adapts to the décor of any room. You can put it in the living room, kitchen, bedroom or in the office – it doesn't have to be a typical household device.

Put in on display...

You can put it on the dresser with your favorite family photos or hang it on the wall, among other photographs. It not only looks beautiful, but also reacts to your gestures.

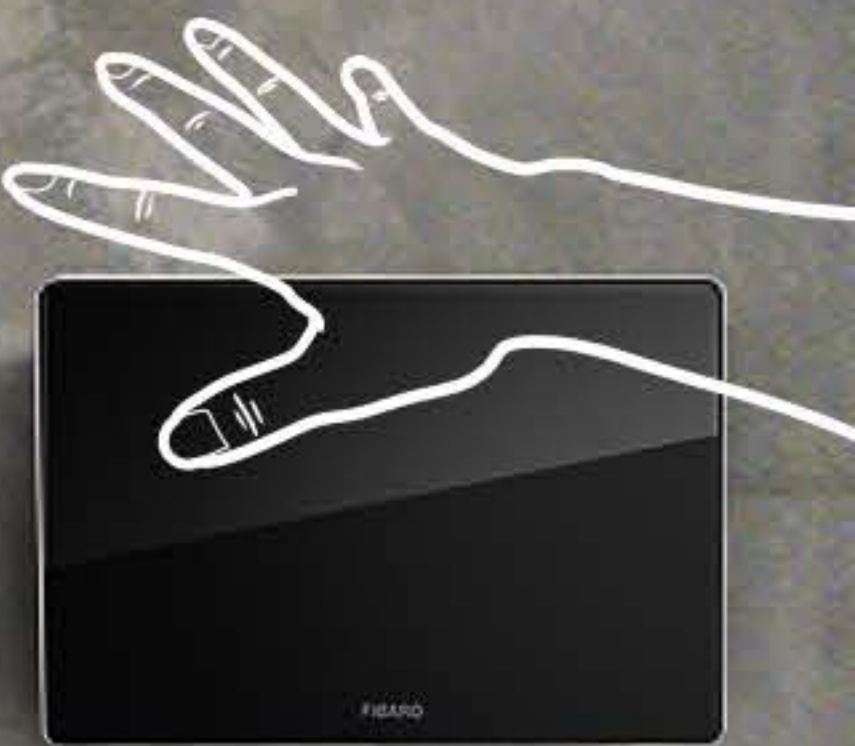

... or hide it!

SWIPE doesn't have to be used as a decoration. You can hide the device under a kitchen counter, coffee table or desk. SWIPE is magical, so it reacts even through those surfaces! Swipe your hand over it - that's enough to turn on lights or radio.

Soon life without SWIPE will be hard to imagine

Gestures play an important role in our lives. A handshake or thumbs up can say more than hundreds of words. Gestures are often used unconsciously and naturally. It will be no different using gestures to manage your home.

Good morning! Time to get up!

Even Monday morning can be made pleasant. You can prepare fresh coffee and a hot bath using FIBARO SWIPE, straight from your bed. Reach out a hand and swipe to the left to prepare favorite coffee. Move your hand to the right and the bathtub will be filled with hot water. That is the beginning of a beautiful day, don't you think?

Smart not only at home

The workplace is called a second home for a reason. It is where we spend most of our time. SWIPE will help you create a friendly surrounding and make the office as comfortable as your home. Control blinds, lights or a projector - everything with gestures of your hands.

Make life easier

Life can be made easier for the people you really care about. Show them the endless possibilities of a gesture, without even getting up from the chair: ventilate the apartment, turn on the heating or boil water for tea. FIBARO SWIPE , with a favorite picture installed, is the perfect solution for the elderly people, who find modern technology difficult to learn.

Heating:

20C° > 24C°

Hands full of dirt?

You can count on your magical assistant!
One swipe of the hand is enough to turn on the lights without getting the switches or wall dirty. Quick, clean and convenient.

Reach inaccessible places

See how the impossible becomes possible.
Close the skylight windows and blinds with a wave
of your hand. Magic? No, it's SWIPE.

Control audio devices

Volume up, volume down, next song, bass boost...
Wave your hand and have full control over your sound system.

Open the doors to your imagination

SWIPE is a technical masterpiece, which can be used in many unconventional ways. How? It depends on you and your imagination. This extremely advanced device has limitless capabilities for you to explore!

Wave Goodbye

Going out? With a simple gesture, SWIPE can activate your 'Goodbye Scene', which lowers your shades, turns off the lighting, and activates the alarm. There is no simpler solution.

Designed to delight

The world's most innovative technology hidden beneath a beautiful, smooth elegant casing. SWIPE is simply perfect in every detail so it impresses in every possible way.
